Consumer Confidence Report Certification Form

Water System Name: CAMP SHALOM / JCA

Water System Number: 1900888

The water system named above hereby certifies that its Consumer Confidence Report was distributed on $\bigcup /O/Q\partial I_{I}(date)$ to customers (and appropriate notices of availability have been given). Further, the system certifies that the information contained in the report is correct and consistent with the compliance monitoring data previously submitted to the Department of Public Health. Signature To summarize report delivery used and good-faith efforts taken, please complete the below by checking all items that apply and fill-in where appropriate: CCR was distributed by mail or other direct delivery methods. Specify other direct delivery method used: "Good faith" efforts were used to reach non-bill paying customers. Those efforts included the following methods: Posted the CCR on the internet at www. Mailed the CCR to postal patrons within the service area (attach zip codes used) Advertised the availability of the CCR in news media (attach copy of press release) Públication of the CCR in a local newspaper of general circulation (attach a copy of the published notice, including name of the newspaper and date published) V Posted the CCR in public places (attach a list of locations) __ Delivery of multiple copies of CCR to single bill addresses serving several persons, such as apartments, businesses and schools __ Delivery to community organizations (attach a list of organizations) _ For systems serving at least 100,000 persons: Posted CCR on a publicly-accessible internet site at the following address: www.

For privately-owned utilities: Delivered the CCR to the California Public Utilities Commission

2013 Consumer Confidence Report

Water System Name:

CAMP SHALOM / JCA

Report Date:

April 2014

We test the drinking water quality for many constituents as required by state and federal regulations. This report shows the results of our monitoring for the period of January 1 - December 31, 2013

Este informe contiene información muy importante sobre su agua beber. Tradúzcalo ó hable con alguien que lo entienda bien.

Type of water sources(s) in use: According to CDPH records, this Source is Groundwater. This Assessment was done using the Default Groundwater System Method.

Your water comes from 1 source: Well 01.

For more information about this report, or for any questions relating to your drinking water, please call (818) 889 - 5500 Ext. 105 and ask for Yoni Chocron, or visit our website at www.shalominstitute.com

TERMS USED IN THIS REPORT:

Maximum Contaminant Level (MCL): The highest level of a contaminant that is allowed in drinking water. Primary MCLs are set as close to the PHGs (or MCLGs) as is economically and technologically feasible. Secondary MCLs are set to protect the odor, taste, and appearance of drinking water.

Maximum Contaminant Level Goal (MCLG): The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs are set by the U.S. Environmental Protection Agency.

Public Health Goal (PHG): The level of a contaminant in drinking water below which there is no known or expected risk to health. FHGs are set by the California Environmental Protection Agency.

Maximum Residual Disinfectant Level (MRDL): The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG): The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Primary Drinking Water Standards (PDWS): MCLs for contaminants that affect health along with their monitoring and reporting requirements, and water treatment requirements.

Secondary Drinking Water Standards (SDWS): MCLs for contaminants that affect taste, order, or appearance of the drinking water. Contaminants with SDWSs do not affect the health at the MCL levels.

Regulatory Action Level (AL): The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

Variances and Exemptions: Department permission to exceed an MCL or not comply with a treatment technique under certain conditions.

ND: not detectable at testing limit ppm: parts per million or milligrams per liter (mg/L) ppb: parts per billion or micrograms per liter (μg/L) pCi/l: picocuries per liter (a measure of radioactivity)

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, spring, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

2013 Consumer Confidence Report

Contaminants that may be present in source water include:

- *Microbial contaminants*, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations and wildlife.
- *Inorganic contaminants*, such as salts and metals, which can be naturally-occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining or farming.
- Pesticides and herbicides, which may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses.
- Radioactive contaminants, which can be naturally occurring or the result of oil production and mining activities.
- Organic chemical contaminants, including synthetic and volatile organic chemicals, which are byproducts of industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff, and septic systems.

In order to ensure that tap water is safe to drink, the U.S. Environmental Protection Agency (USEPA) and the California Department of Public Health (Department) prescribes regulations which limit the amount of certain contaminants in water provided hy public water systems. Department regulations also establish limits for contaminants in bottled water that must provide the same protection for public health.

Monitoring was conducted for Coliform, Fecal, and Nitrate in 2013. However, all analytical results are Non-Detected.

Drinking Water Source Assessment Information:

Assessment Info

A source water assessment was conducted for the WELL 01 of the CAMP SHALOM / JCA of the water system in February, 2002.

Well 01 - is considered most vulnerable to the following activities not associated with any detected contaminants: Septic systems - high density [>1/acre]

Acquiring Info

A copy of the complete assessment may be viewed at: Mountain & Rural Sanitation Program, Water Sewerage & Subdivision 2525 Corporate Place, Room 150 Monterey Iⁱark, CA 91754

You may request a summary of the assessment be sent to you by contacting: Jose Reynosi
Chief Environmental Health Specialist
323-881-4153
323-269-4327 (fax)
